#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Acknowledgment*

1. The amendment filed on 5/11/2005 has been entered.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. **Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gordon et al. (5,924,718) in view of Morrow (5,769,445).**

Gordon et al. in figures 1-5, disclose a skateboard having a pair of substantially parallel surfaces (12, 18), which is spaced from each other to form an interior region. Each surface being formed of a plurality of cured, resin impregnated composite fiber layer having a selected orientation. Wherein the parallel surface are pinches (at location (30)) together at at least one location along the deck to resist shearing movement between the surface. Gordon et al. fail to disclose at least one tubular member positioned between the surfaces in the interior region for stiffening the deck and a filler material.

Morrow in figures 8-10, teaches snowboard having at least one tubular member (84) and a filler material (30'). It would have been obvious to one of ordinary skill in the

art at the time the invention was made to modify the skateboard of Gordon et al. with the snowboard having at least one tubular member and a filler material as taught by Morrow in order to improve the strength of the skateboard without adding significantly weight to the skateboard.

Regarding claim 2, Gordon et al. disclose a pocket (as shown in figure 4), which is formed in at least one of the surfaces at the pinching location.

Regarding claims 3-4, 6 Gordon et al. with the combination of Morrow, the pocket which can be filled with a low density filler material. The filler material in the pocket is covered by at least one layer of composite fiber material.

### ***Response to Arguments***

4. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***
